

Evolving customer behavior and globalization are demanding more innovative IT technologies for businesses to boost their overall enterprise performance and improve customer satisfaction. With a mature global delivery model, deep architectural expertise and best-in-class technology capabilities, our IT development services enable enterprises to drive business innovation, operational excellence and better customer responsiveness.

Portfolio Rationalization & Modernization

Application Development

Enterprise growth and optimum performance require customized, robust applications and platforms to meet each client’s specific business requirements; applications and platforms that are easy to use, agile and scalable to adapt to volatile business conditions. ABMCG’s dedicated application development teams provide comprehensive end-to-end development services; from requirements definition through to triage, testing, implementation, maintenance and support. These customized application development services help our clients quickly adapt to ever changing business needs, ensuring a rapid time to market and improved quality

Application Management

To operate effectively and to remain competent, any organization requires a well-managed IT infrastructure. ABMCG application management services come with a comprehensive range of metrics-based managed services catering to every need and budget. ABMCG leverages unique support and maintenance models to help customers utilize their workforce more effectively, thereby reducing the overall costs of business.

Benefits

- ✓ Design and implementation of new features
- ✓ Product administration
- ✓ Application administration & 24/7 support
- ✓ Performance improvements in existing functionalities
- ✓ Release management
- ✓ Configuration management
- ✓ Corrective maintenance
- ✓ Adaptive maintenance

Application Migration

With the rapid evolution of the technology landscape and the maturity of cloud solutions, organizations are increasingly looking to modernize and migrate critical business applications to the latest technologies and platforms. With experience of handling large migration projects, ABMCG has developed proven models and automated frameworks for application and platform migrations, database conversion, language conversion and testing

Benefits

Java / J2EE application migration

Any-to- any ECM platform migration

VB to .NET migration

BI platform upgrades

Application Migration & Modernization

Application Integration

The emergence of Nexus of Forces is completely changing traditional application integration strategies with the advent of diverse technologies, a variety of databases and new communication protocols. ABMCG Application Integration services help our clients adapt to the new integration landscape and helps them operate and extend enterprise resources to fulfill business objectives, and significantly reduce development, integration and maintenance costs.

Testing Services

ABMCG has developed its software testing solutions by incorporating some of the most advanced and efficient techniques. We help enterprises transform their business applications infrastructure for enhanced quality, faster time-to-market, and higher returns on IT investments.

Portfolio Rationalization & Modernization

Legacy applications are unable to keep up with changing requirements or are unable to interface with newer technologies, leading to high maintenance costs and an increased risk of outages. ABMCG delivers application portfolio rationalization and modernization services for higher reliability and up-time with significant cost savings.
