

In today's digital world, Enterprise Mobility is creating new revenue channels, improving field staff efficiency, and leveraging new modes of user engagement to increase market penetration and customer loyalty. Shorter sales cycles and reduced cost of customer acquisition are significantly boosting revenue generation and profitability; enhancing productivity, efficiency, resource utilization, and streamlining business processes with lower operational costs. ABMCG has delivered innovative Enterprise Mobility Solutions to some of the world's leading organizations.

App Development, Testing and Support and Maintenance

Equipped with in-depth knowledge and expertise with major platforms and frameworks used for mobile app development, ABMCG's Mobile Application Development Services team has successfully delivered and manage complex apps across multiple domains. We have the right experience in Enterprise Mobility Solutions to help our clients meet business challenges and tight deadlines.

Consulting Services

Drawing from our rich expertise in mobile application development and management, coupled with industry best practices, ABMCG works with clients to develop mobility strategies, business & technology plans. We design enterprise mobility solutions to drive productivity and increase business value. ABMCG's consulting services assist with our clients' mobility transformation journeys; helping them realize the full range of mobility benefits.

MEAP Integration & Implementation

ABMCG has a rich experience in Mobile Enterprise Application Platforms (MEAP) along with strong partnerships in the field of Mobility Solutions. This enables our clients to instantiate a platform that optimally supports the building, deploying and management of their specific enterprise mobile requirements.

User Interface, Development & Testing

A powerful user interface bridges the distance between a human brain and a digital product. Understanding human behavior is key to unlocking an exceptional user experience. Whether refreshing an existing application or starting from the ground up, ABMCG's experts will collaborate to provide the optimum user experience that best fits each individual set of requirements.

Mobile Websites

Different mobile systems impose different factors on the end-user's browsing experience. To create a smooth user experience while ensuring that the highest levels of security are maintained, ABMCG's expert development teams utilize their extensive experience to create mobile connections for websites that accommodate the challenges of web navigation from a mobile phone.

Enterprise Mobility Solutions

As more and more enterprise system users navigate the web from their mobile phones, it becomes essential to optimize all your web-based solutions for mobile systems as well. ABMCG's mobile experts have experience implementing for a diverse range of platforms and use cases; including capabilities such as e-commerce, project management, reporting, personal finance and more.

Mobile Porting Solutions

As mobile utilization styles progress, and new systems obtain traction and popularity in the market, the need to enable applications across multiple operating systems grows exponentially. A cross-platform growth viewpoint has always been one of the cornerstones of ABMCG's mobile application and database integration strategy.
